## Overview

In this blog, I'll guide you through the process of replacing capacitors in an inverter, step by step. Inverters are devices that convert direct current (DC) into alternating. I have a Renogy 3000w inverter 12v to 230v (50Hz) R-INVT-PUH1-301235-UK Its a relatively budget model, but a step up from the really cheapy ones. It has let out the magic smoke, after around 2 years (though probably only in constant use ~1yr) I've taken it apart and it was a capacitor which has. Check each product page for other buying options. The main capacitor (marked CBB22 106J500V) is split with dried electrolyte everywhere. 0F, inverter 3W /6kW surge and 2 GC deep cycle batteries. more After reading more about people trying to run their rv a/c off batteries + inverter, I decided to give a try to this.
