

Analysis of communication base station energy storage system outage

Overview

In the communication power supply field, base station interruptions may occur due to sudden natural disasters or unstable power supplies. We mainly consider the. With the rapid development of 5G base station construction, significant energy storage is installed to ensure stable communication. However, these storage resources often remain idle, leading to inefficiency. 3 million sites in 2023, have we underestimated the energy storage demands of modern communication infrastructure?

A single macro base station now consumes 3-5kW - triple its 4G predecessor - while network operators face unprecedented pressure to maintain uptime. Abstract: This study provides an in-depth analysis of power supply interruptions at mobile communication base stations (BS) operated by the Khorezm branch of Uzbekistan's Uzmobil national mobile operator.
