

Analysis of the reasons for not using wind power for electricity generation

Overview

This post will explore the main arguments against wind power, examining both onshore and offshore installations, to provide a balanced view of the controversies surrounding this renewable energy source. Fossil fuels (such as coal, oil, and natural gas) are finite, nonrenewable natural resources, formed over millions of years from the remains of ancient plants, animals, and microorganisms that were subjected to enormous heat and pressure deep within the Earth's crust. Alternative energies include. Renewable electricity, mostly wind power, is useless in every dimension. It is extremely expensive but is made to look cheap by hiding an 80% subsidy. Wind turbine construction on Amherst Island, Ontario. Critics point to issues such as unreliability, environmental damage, and economic inefficiency.

Analysis of the reasons for not using wind power for electricity generation

Why Wind Power Is Useless

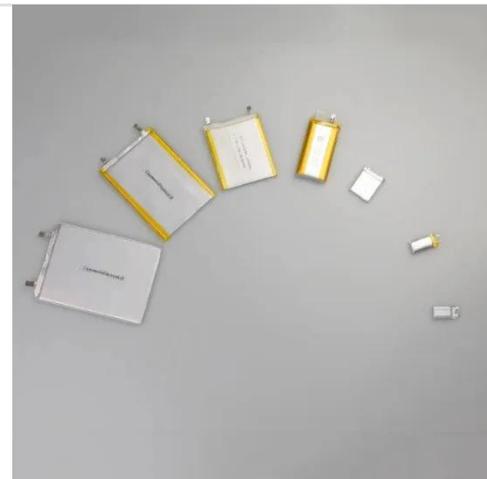

We look at what price a wind power company, operating without subsidies or long term contracts, would have to get for its electricity to make a reasonable profit. We compare that to how ...
