

Are photovoltaics and energy storage two industries

Overview

Photovoltaic (PV) systems convert sunlight into electricity, acting as power generators. Think of PV as a water pump and ESS as a reservoir – one creates resources, the other stores them. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. Energy storage systems (ESS) store excess energy for later use, functioning like rechargeable batteries.

Understanding Solar Storage

Millions of solar projects have been installed in the US; and while most solar installations do not include any form of energy storage, pairing solar with battery storage has become increasingly

common.
