

Armenia s solar power generation and energy storage prospects

Overview

The World Bank estimates that Armenia will need to invest \$3 billion in the electricity sector to transition to a solar-powered economy with substantial parallel investments in international and domestic grid interconnections and reinforcement, and energy storage. Armenia's cumulative solar capacity has reached 1. The total indicates around 615 MW of solar were added in 2025, when considering the International Renewable Energy Agency (IRENA) reported. Solar's share in Armenia's total electricity output in 2024 stood at 10.4%, well above the global share of 6. Total solar production of 975 gigawatt hours (GWh) is divided nearly equally between utility-scale farms and distributed generation (mostly rooftop). This wasn't just a number; it represented a significant leap towards energy independence, economic resilience, and a sustainable future. 1 GW, according to pv magazine. The country's Minister for Territorial Administration and Infrastructure, Davit Khudatyan, confirmed the cumulative. Last month, the government approved a 40% renewable energy target by 2030 – but here's the catch: aging grid infrastructure could derail progress unless paired with smart storage solutions.

Armenia's solar power generation and energy storage prospects

Armenia's green energy transition: Solar power capacity set to reach ...

If in 2021 the share of solar energy in the total volume of electricity production in Armenia was 1.2%, then in 2024 it will be ten times more - 11.9%. This remarkable growth highlights the ...
