

# BMS and soc battery

## Overview

---

The major task of a battery management system (BMS) is to provide security and longevity of the battery, while also optimizing battery performance. Accurate SOC estimation is critical not only for user experience (e., reliable range prediction in electric vehicles) but also. The State of Charge (SOC) and the State of Health (SOH) are two critical factors in the world of rechargeable batteries that are extremely important in determining the performance and longevity of the battery. You may want to better understand the State-of-Charge  $\{ \text{SoC} \}$  and. Battery management systems (BMS) are crucial in modern energy storage solutions, particularly in electric vehicles, renewable energy storage systems, and consumer electronics.
