

Blue Solar Power

Overview

BlueSolar is the first commercial hybrid technology that intelligently integrates photovoltaic (PV) technology with solar thermal (ST) technology. With Blue Raven Solar you own the solar system installed on your home and you get the upside value - not some third party or the utility company. The design of your system, permitting process, financing and single-day installation are all taken care of by Blue Raven. Avoid standard electricity. Low voltage-temperature coefficient enhances high-temperature operation. 25-Year limited warranty on power output and performance. The company prioritizes a simple, straightforward process by helping customers every step of the way, including creating the designs, filling out the appropriate permits and installation. Take control of your power with premium solar + storage. As the global community increasingly seeks sustainable energy solutions, Blue Energy Solar emerges as a viable option benefiting both the environment and financial considerations.
