

Can I use air conditioning in summer when solar power is generated

Overview

The short answer is yes, but the details depend on your AC type, the size of your solar system, and your energy consumption patterns. With the right setup, solar power can not only keep your home cool but also lower your electricity bills and reduce your reliance on the grid. If you've got solar, can you run aircon without worrying about cost?

Not quite You're inside on a scorching 40°C day, running your air conditioner on full for extended hours. So, how do you choose the right setup to match your needs?

Here are some key factors to consider: Powering an air conditioner with solar is more straightforward if you're connected. Photovoltaic (PV) modules are very powerful, and are capable of running A/C units, delivering enough power to cool rooms for several hours using solar power. In this article, we go over some interesting information about running A/Cs with solar power.
