Overview

Flat lithium-ion or lithium polymer batteries offer high energy density, are lightweight, and provide flexibility. However, if a battery is allowed to discharge completely, it can enter a state known as "sleep mode," particularly with lithium-ion and certain AGM (Absorbent Glass Mat) batteries. When this happens, the Battery Management System (BMS) activates protective measures to preserve the battery's health. There are several types of flat batteries, each designed for specific uses and applications. Let's break down the most common ones: 1. These batteries are sometimes made to have a low self-discharge rate.

Can lithium battery packs be used flat

What happens if my Lithium battery goes completely flat?

If you find that your battery has gone completely flat and the BMS has entered sleep mode, don't worry. You can follow the steps below to restart your battery effectively.
