

# Can photovoltaic panels be cleaned with rainwater

## Overview

---

Australian solar industry professionals agree that while rain can help, it is only a partial solution. While light rain can remove loose dust from the panels, the rain typically does not remove the bonded dirt or debris, such as pollution residue, bird droppings, salt spray, and. Modern solar systems that function well in low light conditions can experience a drop in electricity production on rainy days, especially during extended periods of rain or heavy overcast conditions. Many homeowners consider the decrease in electricity production as a normal fluctuation and do not. Learn when natural rainfall is sufficient and when manual cleaning is essential for optimal solar panel performance and energy output. To clean solar panels, start by turning off the system for safety. Then, remove any loose debris with a brush or leaf blower.
