

# Can photovoltaic panels be profitable Why

## Overview

---

Solar farming can be profitable, with average returns of 10-15% annually. Initial setup costs range from \$800 to \$1,200 per kW of capacity while operating costs are typically low. Revenue depends on local energy prices and solar irradiance levels. Solar farming, the practice of harnessing the sun's energy through vast arrays of solar panels, has gained significant attention as a sustainable energy source. As of 2025, it not only contributes to environmental conservation but also presents a potential income source for landowners and. As the global appetite for renewable power continues to grow, Solar panels farms are a necessity to meet sustainability targets. Furthermore, the dramatic price falls, better PV cell efficiency, battery storage, and smart inverters are boosting the growth of solar farms in both urban and rural. The average operating cost of a rooftop solar system is now 6-8 cents per kWh, depending on its size, type of equipment, and local incentives.
