

# Can solar panels generate electricity without mains electricity

## Overview

---

The short answer is yes, solar panels can work without electricity, but their functionality depends on several factors, such as the type of system installed, the presence of a battery storage system, and the availability of sunlight. Solar panels require a frequency and voltage reference to provide a steady power source, this reference is usually provided by the battery or the grid. While it is not common, it is possible to use a solar panel directly without a battery or the grid as a reference, but you need to use an. This leads to a common question: Can I install solar without in-home battery storage?

The short answer is yes: You can absolutely use solar panels without battery storage. In fact, the majority of residential solar installations in the U. are “grid-tied” systems without batteries (although solar. Most people assume that solar panels require batteries to store and utilize the generated electricity, but that's not entirely true.
