

# Causes of damage to photovoltaic PD panels

## Overview

---

Surface damage is a frequent cause of solar panel performance issues, especially in aging systems or those exposed to harsh environments. This translated to an estimated \$10 billion in lost energy value worldwide in 2024, and can cost homeowners hundreds of dollars each year in reduced savings. Common solar panel defects, such as discoloration, delamination, and solar panel diode failure, often become more likely as systems age. However, they are exposed to various environmental factors that can lead to damage and degradation over time. These issues can arise from hardware malfunctions, poor network configurations, or interference in wireless connections. Despite the need for a long-lasting, reliable solar installation, we still see many solar panel brands continue to race to the bottom to compete on price.

## Causes of damage to photovoltaic PD panels

---

### Causes of Solar Panel Damage

In this article, we will explore the common causes of solar panel damage, understand how they can impact the performance and lifespan of solar panels, and discuss preventive measures to ensure ...
