

# Chile's new energy storage ratio requirements

## Overview

---

7 GWh of energy storage is forecast to be installed: • Chile's administration considers storage strategic for the country's goals (at least 60% of renewables by 2030, 100% by 2050). It proposed a law to allow the tender of 2 GW of BESS at. Between 2023 and 2030, 5. A methodology has been introduced to evaluate and recognize the power capacity of stand-alone energy storage systems, and the availability of data and studies has been improved to accurately identify peak hours that determine the calculation and subsequent payment of capacity, among other new. Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation. Chile has the potential to run. Driven by the dual engines of ambitious decarbonization mandates and the existential needs of its world-leading mining industry, Chile's energy storage capacity is poised for exponential growth. 5 GW of projects currently under construction and a target of reaching 2 GW of operational. Fitch Ratings-Sao Paulo/New York-01 April 2025: Project finance transactions in Chile are expected to increase due to the recent commissioning of large battery energy storage systems (BESS), Fitch Ratings says. Ensuring projects are paid for injecting power into the grid during peak periods has supported growth, and ambitious battery energy.

## Chile's new energy storage ratio requirements

---

### Chilean Battery Energy Storage Systems Stabilize Energy Supply, ...

The Chilean regulatory landscape has evolved to include battery storage with last year's publication of Decree 70, which defined the rules for recognizing the capacity provided by storage ...
