

China-Russia Solar Power Plant

Overview

In a striking move, China and Russia have joined forces to build a power plant on the Moon, challenging the US's leadership in space exploration. This collaboration marks a significant shift in space geopolitics and could redefine future lunar missions and energy utilization strategies. — Reuters pic Stay updated on the latest news and insights. Both nations are working jointly on the ILRS, a large project.

China-Russia Solar Power Plant

GRADE A BATTERY

LiFePO4 battery will not burn when overcharged over discharged, overcurrent or short circuited and can withstand high temperatures without decomposition.

China-Russia nuclear reactor on moon to begin construction in 2028

NASA's power plans for its base include deploying large solar arrays on the lunar surface. The energy will then be distributed across the base using an extensive network of pipelines ...
