

# Copenhagen solid-state batteries

## Overview

---

At DTU, researcher Mohamad Khoshkalam has invented a material that has the potential to replace lithium in tomorrow's super battery: solid-state batteries based on potassium and sodium silicates. These are rock silicates, which are some of the most common minerals in the Earth's. Copenhagen, Denmark, 20th of January 2025 - European Energy has started on its first large-scale battery storage project. This is done in collaboration with Kragerup Estate. This is the first battery storage project that European Energy has undertaken in Denmark, and it will provide valuable. Solid-state batteries are essentially the same as the well-known lithium-ion battery, but in solid form. In solid-state batteries the electrolyte (the connection between anode and cathode) is glass-based, i.
