

Cost of a 100kW Photovoltaic Energy Storage Unit for Australian Farms

Overview

A 100kW solar system in Australia costs \$86,200 - \$95,000, produces around 380 - 440 kWh per day, and typically suits commercial and industrial sites aiming to save \$28,000 - \$32,000 per year, depending on usage and feed-in tariffs. The 100kW commercial solar system generates an average of 400kWh. 100kW solar systems are among the most popular commercial solar system sizes in Australia, as this size is the cutoff point for up-front incentives through the federal government. A typical 100kW system would require an investment of \$25,000 to \$40,000 in panels alone. Our 100kW solar package provides steady and reliable power for every part of your business. Installing a 100 kilowatt commercial solar power system is the perfect way to cut your electricity bills, reduce your carbon footprint and boost your profits. Unlike rooftop solar systems for homes, solar farms generate electricity on a much larger scale.
