Overview

For all potential grid-scale storage technologies, we compile key techno-economic parameters, including costs and technical specifications, in Table 1 for a straightforward comparison. A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed. Several battery chemistries are available or under. Recent energy storage auctions in India reveal record-low prices, with unsubsidized standalone battery storage bids at 2. Our analysis, based on implied solar and storage costs from these bids and bottom-up global cost estimates. Estimated current & projected LCOS of key grid-scale storage technologies in India. The assessment adds zinc.
