

# Cost of large energy storage power stations

## Overview

---

A storage power station typically costs between \$200 to \$800 per watt, depending on several factors including the type of technology employed, capacity, location, and installation costs. As the renewable energy industry continues to grow rapidly, energy storage power stations have become a focal point for investors. Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate. How much does a large energy storage power station cost?

Cost of a large energy storage power station varies considerably based on multiple factors, including 1. design and installation complexity.
