

Cuba electric vehicle costs

Overview

"The price is based on the import cost, including tariffs, plus the commercial margin of the seller, which is reduced from 30% to 20%, and a differentiated special tax ranging from 0% for an electric vehicle assembled in Cuba to 35% for a high-end vehicle," explained the. "The price is based on the import cost, including tariffs, plus the commercial margin of the seller, which is reduced from 30% to 20%, and a differentiated special tax ranging from 0% for an electric vehicle assembled in Cuba to 35% for a high-end vehicle," explained the. New Tariff Rates: Electric and fuel-efficient vehicles will benefit from preferential tariffs of 10%, while internal combustion vehicles will face rates as high as 30% based on their category and segment. Commercial Margin Reduction: The commercial margins for state importers and sellers are capped. Cuba eases the importation and sale of vehicles, prioritizing electric ones with a 10% tariff. These measures are insufficient in the face of a transportation crisis and high costs. The import of electric tricycles with more than two seats or cargo capacity is also permitted. The blackout situation in Cuba is getting more complicated: Unit 1 of the Felton thermoelectric plant is paralyzed due to a. Sales will be made through wholesalers and the price will be based on the acquisition cost and with up to 30% of commercial margin. The Cuba Electric Vehicle Market accounted for \$XX Billion in 2023 and is anticipated to reach \$XX Billion by 2030, registering a CAGR of XX% from 2024 to 2030.
