

# DC Microgrid Relay Protection

## Overview

---

In this paper, an adaptive OC scheme for solar-based DC microgrids is presented, which is suitable for all grid architectures and does not need adding extra power equipment in the DC microgrid. Also, there is no need to have rectifiers with the ability to limit the fault current in. This paper was presented at the 71st Annual Conference for Protective Relay Engineers and can be accessed at: <https://doi>. For the complete history of this paper, refer to the next page. Advance online publicat the last decade in both academia and industry. DC microgrids have demonstrated superiority over AC microgrids with respect to reliability, efficiency, control simplicity, integration of renewable energy sources, and connection. Hence, in this paper, a new methodology using the area under the current curve during fault is proposed to detect the fault and provide backup to the adjacent line. By enhancing resilience, integrating renewable energy, improving.

## DC Microgrid Relay Protection
