

Democratic republic of congo v80 can reduce the watts of solar energy

Overview

The initial deployment features a 60kW/230kWh hybrid system that combines solar energy with diesel power to ensure continuous electricity supply. This system includes: A 60kW off-grid inverter. Two 50kW high-voltage solar chargers. Off-grid solar offers modular solutions to rapidly expand affordable energy access. However, there is no public off-grid electricity service and private sector delivery is hampered by a weak regulatory environment, fiscal framework, lack of access to credit, and inefficient import procedures. In the quest to tackle energy challenges in the Democratic Republic of Congo (DRC), JNTech is spearheading the adoption of hybrid solar-diesel microgrid systems.
