

Do Southern photovoltaic panels need to be cleaned

Overview

In general, you should clean your solar panels about every six months—but it really depends on your location. If you live somewhere where it rains a lot, you won't need to clean your panels as often as someone who lives in a dry and dusty area where debris builds up more. While going solar is pretty much a "set it and forget it" way to power your home with renewable energy, depending on where you live, you'll still need to clean your solar panels once or twice a year to ensure you get the maximum energy benefit from your solar investment. Others feel that solar panels should only get a rinse off once in a while if you see. How frequently should solar panels be cleaned and maintained and during what time period?

What are the components of a solar installation?

First and foremost, let us introduce the two different terms discussed in this article: Solar panel cleaning: this entails washing the panels like windows. The electricity production largely depends on how clean the solar panels are. Cleaning the panels is not a difficult job. However, you may need some help. You can either do it yourself or hire professional PV panel cleaning services.
