

# Does India buy solar power from China

## DISTRIBUTED PV GENERATION + ESS

## Overview

---

Despite some decline, India still relies on China for over 50% of its solar cells and modules, with imports worth nearly \$4 billion in FY2024. India lacks manufacturing strength in upstream components like polysilicon and ingots, and efforts to build local capacity face cost and. India achieved 50% non-fossil electricity capacity five years ahead of its 2030 target, largely driven by solar energy expansion. China controls 75–95% of the global solar PV supply chain, including 91% of polysilicon and over 97% of wafers, making it the primary supplier worldwide. Despite some. India imported 352. 57 lakh solar photovoltaic (PV) modules worth USD 1,696. India has set an ambitious renewable energy goal of 500 GW by 2030. With solar power poised to play a central role, the challenge of reducing dependency on imported solar equipment, particularly. India's solar industry and manufacturing industry is gaining momentum, emerging as a serious contender to challenge China's dominance, despite mounting U. With efforts underway to reduce dependence, one must ask themselves: can India.

## Does India buy solar power from China

---

### India's solar industry wants to grow, but it has to face ...

The government wants India's solar industry to supply the world, but its ambitions collide with its dependence on China
