

# Double-blade generator caught fire

## Overview

---

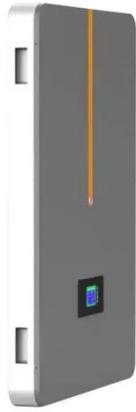

Overloading your generator can cause overheating and fires. Use a power strip with a built-in circuit breaker to help prevent overloads. Let's unravel the truth behind this burning question. What are the most common causes of generator fires?

□. What causes a generator to catch fire?

When gasoline is spilled on a hot generator, it will burst into flames with a risk of a blowup! Overloaded generators can potentially catch fire as well. It ran for a total of 4 days!! I would definitely recommend this brand but it's scorched off : r/tulsa My generator caught fire on day 2 AM. Along with it comes the responsibility to maintain it for safe usage. Fire in a generator may occur when there is less. Generators run on flammable fuel and generate heat, so several factors can turn them into fire hazards. Spilled fuel on hot engine parts is especially dangerous: gasoline or diesel can ignite on contact with a hot generator.
