

Efficient industry

Overview

Industrial efficiency refers to the ability of a company or institution to maximize output while minimizing waste in terms of materials, energy, time, and financial resources. The industrial sector can be divided into energy-intensive industries, responsible for three-quarters of total industrial demand, and less intensive industries, which are responsible for the remainder. A particularly important opportunity to improve efficiency is in developing technologies to recover, store, and/or use waste heat. It is a critical measure of economic health and can be assessed at various levels, including the individual company. By simply implementing some cost-effective efficiency measures, like capturing all that wasted heat your machinery generates (you know, that free energy just floating around!), U. industries could slash their energy use by a whopping 14-22%. The twin goals of sustainability and efficiency are no longer mutually exclusive; instead, they represent.
