

# Energy storage battery lithium battery positive electrode

## Overview

---

The function of the positive electrode revolves around the controlled movement of ions, which are the charge carriers within the battery structure. Lithium-ion batteries are the dominant electrochemical grid energy storage technology because of their extensive development history in consumer products and electric vehicles. During discharge, conventional current flows out of this terminal into the external circuit. Conversely, during charging, the. The Global Positive Electrode Lithium Supplement Market was valued at US\$ 264 Million in 2025 and is projected to reach US\$ 6,923 Million by 2034, growing at a Compound Annual Growth Rate (CAGR) of 61. 0% during the forecast period (2024-2034).
