

# Energy storage power station independent secondary frequency regulation

## Overview

---

This paper proposes a secondary frequency regulation approach using energy storage-assisted thermal power units to address fluctuations from renewable energy. At the same time, with the rapid development of renewable energy and the increasing demand for flexibility in power systems, electrochemical energy storage technology has shown great. With the increasing integration of large-scale renewable energy sources, the coordinated participation of hydropower and energy storage in frequency regulation has become a critical means of ensuring the safe and economical operation of power grids.
