

Fiberglass photovoltaic panel frame structure

Overview

FRP solar mounting structures, also known as fiberglass solar structures or FRP PV supports, provide lightweight, corrosion-resistant support for photovoltaic panel installations. Designed for photovoltaic mounting systems, they are well suited for ground-mounted and. 3 Product quality. GRP or FRP Structural pultruded profiles are manufactured by combining a resin matrix with a fibre reinforcement. They are better than traditional materials. This frame integrates high-strength. “This composite material is used in applications such as wind turbine blades, to withstand wind pressure, vibration and centrifugal force, as well as railway tracks, to withstand the pressure and vibration of passing trains,” a spokesperson from the company told pv magazine.
