Five-row photovoltaic bracket on flat roof

Overview

5" or 11" row spacing to maximize energy production and fit more modules per roof. Set panels in place, then clamp with a single tool. Snap-in hardware and a new mid-support option streamline installation while. Choose from 7. We challenged the standard rail substructures on the market and designed substructures based on aluminum brackets, making a name for ourselves worldwide. The low weight and compactness of the brackets make them easy to. RM™5 is a south-facing, 5-degree ballasted mounting system engineered for maximum layout flexibility and installation speed on flat roofs. Upgraded high and low side module connections increase system performance and eliminate module adaptor accessories while maintaining clawFR's easy to install architecture. clawFRplusTM. Adding solar to a flat roof has built-in complexity and requires a wide array of options to meet the building requirements—such as a mechanically attached system, a ballasted system, or even a hybrid system. It's capable of housing various sized solar panels at a 5° angle, so panels in one array can be different sizes or orientations. These racks are weather resistant and.
