

Flat single-axis tracking photovoltaic bracket motor

Overview

The large-span flat single-axis tracking type flexible photovoltaic bracket system designed by the application has the characteristics of capability of automatically adjusting and tracking the incident angle of sunlight, short construction period, small number of pile foundations. The large-span flat single-axis tracking type flexible photovoltaic bracket system designed by the application has the characteristics of capability of automatically adjusting and tracking the incident angle of sunlight, short construction period, small number of pile foundations. The application belongs to the field of photovoltaic supports, and discloses a large-span flat single-axis tracking type flexible photovoltaic support system, which comprises a load-bearing cable system with a fishbone structure, wherein the load-bearing cable system comprises a first cable with a. Solar trackers will automatically track the trajectory of the sun throughout the day to increase the power generation of solar panels. By adjusting the angle of the photovoltaic panel, the power generation can be increased by more than 20% on average. Generally divided into flat single-axis. * No welding on-site design makes simple and efficient installation, greatly improve installation efficiency and improve fault tolerance * Customized design for different scenarios and environments to reduce costs, combining the boundary of the photovoltaic area, the design distinguishes between. The horizontal single-axis tracking system is mainly applied in the middle and low latitudes, and a pair of horizontal single-axis strings are connected by a set of driving devices to achieve synchronous tracking of multiple strings. : Horizontal Single-Axis Tracking System Ray Solar. The ground tracking bracket is suitable for installation in large commercial, public utility power stations, mountainous and uneven areas. The product has a sturdy structure and strong stability.

Flat single-axis tracking photovoltaic bracket motor

Single axis tracking photovoltaic bracket

A flat single-axis solar tracking bracket is a photovoltaic bracket that can follow the sun's sunshine trajectory. It rotates only on one axis, the horizontal axis, and is parallel to the ground, so it is called a ...
