

French mobile energy storage battery project

Overview

TAGENERGY, a global leader in low-carbon energy solutions, launches construction of France's largest battery energy storage platform (France, Marne). This landmark project marks the start of an ambitious expansion plan for 2025, with accelerated solar and storage development. The 100 MW/200 MWh battery energy storage system (BESS) is connected to the grid with a charge and discharge voltage of 63 kV. It is expected to be fully operational by the end of 2025. Growth is slower than in solar-heavy Germany. The project will mark a significant milestone for the French energy system, being France's first large-scale 2-hour. The Cheviré project is located on the former site of a coal, gas and oil-fired plant, transforming it into a renewable energy center.
