

Front and rear columns of photovoltaic bracket

Overview

It is a reinforced concrete independent foundation set under the front and rear columns of the photovoltaic bracket, consisting of a foundation bottom plate and a foundation short column above the bottom plate. A PV bracket is a support structure that arranges and fixes the spacing of PV modules in a certain orientation and angle according to the specific geographic location, climate, and solar resource conditions of the PV power generation system construction. As an important part of the PV power. Photovoltaic mounting systems (also called solar module racking) are used to fix solar panels on surfaces like roofs, building facades, or the ground. 1 rails with locally sourced 2-inch schedule 40 pipe to build a simple, low-cost structure with columns of 3 or 4 modules in landscape orientation. Which S-5! Attachment is The Right Way for Mounting Balance of System Components?

Balance of System.
