

Gas stations can be equipped with solar power generation

Overview

At first glance, solar power at gas stations is an oxymoron. However, with their large, sprawling roofs and parking lots that provide a buffer from shade obstructions, gas stations are among the low hanging fruits of the booming commercial rooftop solar industry. Besides, gas stations have to pay. GreenFleet Stations is pioneering the conversion of outdated infrastructure into solar-powered charging networks, creating sustainable transportation solutions while revitalizing local communities. We transform outdated gas stations into modern EV charging hubs that serve the community and protect. Petrol stations are facing challenges to their profitability from rising energy prices coupled with the need to operate electricity-intensive equipment like fuel pumps and refrigerators, freezers, and lighting for onsite convenience stores. We explore the drivers behind this growing trend and the technology making it possible. To start, running multiple refrigerators, air conditions and lighting, inside and outside, 24 hours a day can cost thousands of dollars each month especially with current high utility prices. This month, Sano Energy completed a solar energy storage and EV charging project at a gas station.

Gas stations can be equipped with solar power generation

Commercial Applications

Upgrade your petrol stations with SolarEdge commercial solutions. We design and install solar systems that are efficient, sustainable and cost-effective.
