

Generator rear air leakage phenomenon

Overview

Gas leaking from a generator's air filter is a common symptom that indicates underlying mechanical or maintenance issues. This problem not only affects generator performance but can also pose serious safety hazards such as fire risks and toxic fumes. Immediate attention is required to prevent further damage. A leaking generator can pose safety risks and affect. If your gas-powered generator is leaking fuel, the most likely culprits are a worn carburetor bowl gasket, a defective float assembly, a cracked fuel line, or a damaged fuel tank. If there's a leak at the base of the carburetor, it might be time to get a new float bowl gasket.
