

German energy storage project clean energy

Test certification
CE  FC 

Overview

LEAG Clean Power will deploy the 1GW/4GWh standalone battery energy storage system (BESS) in Jänschwalde, a municipality in Germany near the country's eastern border with Poland. The low-carbon subsidiary of German energy company LEAG is constructing Europe's largest single-site battery storage project, in partnership with Fluence. — Batteries are a crucial component of the energy transition in the region and for integrating renewable energy into the power grid. The project is being developed by Fluence Energy, a U.S. company. The cooperation underscores LEAG's commitment to ensuring reliable and sustainable energy. A rapid increase in large-scale systems accelerated the growth of Germany's total battery storage capacity last year, pv magazine reported. A total of about 526,000 new batteries with a combined power output of almost 3.7 gigawatts (GW) and a storage capacity of around 7.
