

Gigawatts of new solar

Overview

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW in the second half of the year, according to our latest survey of electric generating capacity changes. According to the US Solar Market Insight 2024 Year in Review report released today. The Gemini solar power plant in Nevada is hosting the recovery of a rare plant called the three cornered milkvetch while adding 690 megawatts of clean power and 380 megawatts of storage to the local grid (cropped, courtesy of Primergy/Gemini). The combined 200 GW production could begin ramping up over the next three years.

Gigawatts of new solar

Chart: Solar, batteries to lead US power plant... , Canary Media

This year, utility-scale solar is expected to continue its winning streak as the largest source of new electricity generation. More than half of new power plant capacity built this year will be ...
