

Grid-connected energy storage cabinet used at danish airports

Overview

The Kvosted energy park combines large-scale solar generation with a 200 MWh battery system in Denmark, enabling electricity storage, grid balancing and improved asset economics. In airports of the future, it becomes crucial to be able to store power from solar and wind energy to reduce emissions and achieve the goal of net-zero operation. Energy storage in batteries is part of the solution. Even though obtaining approval to operate a battery system in an airport's critical. Copenhagen Airport has achieved a significant milestone by installing a large battery for storing green power, making it one of the pioneering airports in Europe to do so. The airport is a key partner in the EU-back ALRIGHT project that is designed to find smart solutions for the aviation sector based around the use of sustainable aviation fuels (SAF) and.

Grid-connected energy storage cabinet used at danish airports

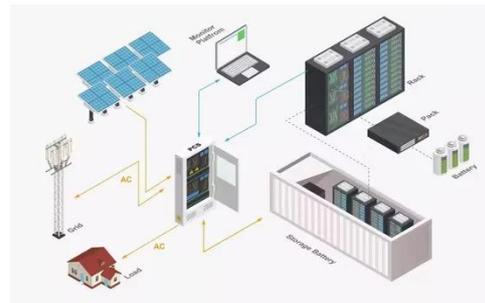

Copenhagen Airport installs large battery for green energy storage

As one of the first airports in Europe, Copenhagen Airport has had a battery installed for storing green power. It is a milestone achieved as partners in the EU project ALIGHT have ...
