

Guinea-Bissau solar cell manufacturer

Overview

The World Bank, IDA, ESMAP, and GCF are backing Guinea-Bissau's first solar power plants with a \$78.15 million investment aimed at decarbonizing the country and expanding electricity access. While the global solar industry often focuses on large-scale power plants, some of the most stable and impactful business opportunities lie in addressing specific, unmet local needs. The agreement was signed between Dr Fidelis Forbs, Minister of Energy of Guinea-Bissau. The most common product being manufactured by solar companies are the solar photovoltaic (PV) panels, which are made with several subcomponents such as solar wafers, cells. Under the Solar Energy and Access to Electricity Development Project, the World Bank will assist Guinea-Bissau until 2030 and has already. Electricity-starved Guinea Bissau will get \$48m from the International Development Association, Green Climate Fund and Esmap to catalyse solar energy generation and improve on low levels of electricity access. The company has been in business for over three decades now, and it has had considerable involvement in all aspects of solar power — from PV.
