

# Highway guardrails equipped with photovoltaic panels

## Overview

---

These are guardrails that have integrated solar-powered lighting systems, providing illumination to enhance visibility and safety during nighttime driving. How do they function effectively?

Solar-powered guardrails are equipped with photovoltaic panels that charge batteries during the day. This trailblazing photovoltaic guardrail is set to transform road infrastructure by integrating renewable energy production with highway safety. Developed to enhance sustainability, this groundbreaking innovation could help decarbonize Europe's transport infrastructure. With this innovative approach, we can utilize infrastructure for dual purposes. The integration of transportation and energy systems can optimize roadside space utilization for renewable energy generation, thereby reducing energy consumption and carbon emissions in the transportation sector.
