

Household electric car charging

Overview

The fastest way to charge your electric car at home is with a level 2 charging station. Also, it needs to be wired directly into your domestic electricity supply and may require a certified electrician. Plugging in takes less than a minute and while it can take hours to fully charge, it happens while you are asleep and can allow you to skip visiting a fuel pump once or twice a week. Charging at home is typically the most time- and cost-effective method, plus you start each day with a fully charged battery. Have you figured out how to charge an electric car at home?

That's the biggest question every new electric vehicle (EV) owner asks. This might not be an easy solution for renters, or people who live in large apartment or condominium complexes.
