

# How many amps does a 6v 5 watt solar panel equal

## Overview

---

For the calculation, we'll use the average voltage of a solar panel, which is 17V. The current is therefore 88.85 amps under standard test conditions (STC). 3 amps in a 12v battery per hour. 300-watt solar panel will store 25 amps in a 12v battery per. This calculator simplifies the process of converting watts, a measure of power, into amps, which represent the flow of electrical current. Found this useful?
