

# How many volts should the solar panels be connected in series to the inverter

## Overview

---

This setup increases your overall system voltage to 36-48V, ideal for charging 24V batteries or connecting to modern grid-tie inverters. Solar panels are wired in series when you want to increase the total voltage in a system. In this configuration, the voltage outputs of all panels add up while the current remains low on a level of what a single solar panel can provide. The environmental conditions affecting voltage output, 4. This configuration is particularly suitable for high-voltage applications and works optimally with MPPT. Should you connect your solar panels together in series or parallel?

Or a hybrid of both?

The right answer depends on the number of PV modules, the planned layout, and your electricity generation goals.
