

# How many years does it take for solar power generation in Inner Mongolia to pay back

## Overview

---

It took 12 years for the region to reach its first 10 GW of solar power—but only two years to double that figure. Blessed with abundant and widely distributed solar resources, Inner Mongolia has seen explosive growth in renewable energy in recent years. This marks a major milestone in China's clean energy push. Developers then obtain a USD-denominated tariff from the ERC, set in accordance with the payback period of the investment (Art. A 2019 amendment capped the tariff at SD 0. China has launched an ambitious project known as the “Great Solar Wall” in Inner Mongolia, which by 2030 will generate 48 billion kWh of. The Inner Mongolia autonomous region is leveraging its abundant wind and solar power potential to revolutionize its energy landscape, transforming itself into a hub for clean, sustainable power generation, the region's officials said on Friday. The project is significant not just for its impressive capacity, but also for its integration with an 800 MW thermal power plant. Wang Lixia, the autonomous region's chairwoman, said.
