

How many years is the life of a wind turbine generator

Overview

On average, a modern wind turbine generator lasts between 20 and 25 years, but this can vary widely depending on several technical and environmental factors. With most wind turbines being installed in the last decade, it is largely unknown if they will make it to the designed 20-25 year life. This duration aligns with initial investment recovery plans and. There is no evidence that wind turbine generators have a lifespan of only three or four years.

How many years is the life of a wind turbine generator

Wind turbines are ageing - what happens next?

Wind turbines have a lifespan of between 20 and 30 years. The world's first windfarm was erected in New Hampshire, US, in 1980 and was 20 turbines strong. It was followed by the first ...
