

How many years is the standard warranty period for energy storage systems

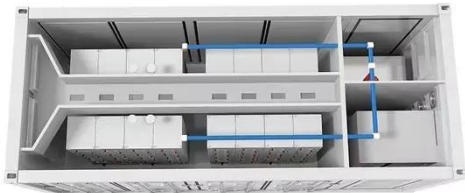

Overview

Most residential energy storage systems come with a standard warranty that typically ranges from 5 to 15 years. This is crucial, as performance is directly. **FIVE (5) YEAR SYSTEM PART WARRANTY FOR A QUALIFIED SYSTEM** - The Part(s) of a qualified System are warranted for a period ending five (5) years after the date of original installation. In the absence of proof of the date of original installation, the warranty start date will begin ninety (90) days. Battery energy storage systems (BESSs) enable system operators and utility providers to store energy for later use and perform many functions to make the electrical grid smarter and more resilient. Battery warranties typically won't reimburse for labor costs associated with installing new equipment or shipping fees for new equipment. Look no further than how the automotive industry handles electric vehicle warranties.
