## Overview

---

According to recent reports, the average cost of establishing a solar farm in Australia ranges from \$1 million to \$3 million per megawatt, depending on the size and location of the installation. Here's a quick cost breakdown: Tip: Many Australians choose a 6.6kW solar system as it strikes a balance between cost and daily energy output for. System size and capacity: The cost of an off-grid solar system heavily depends on its size and capacity, measured in kilowatts (kW). Larger systems that can generate more electricity will generally be more expensive due to the increased number of solar panels and storage capacity required. Solar. Many rural owners face rising grid costs, unreliable supply or no grid connection at all; off-grid solar systems solve those problems by combining solar panels, battery storage and control electronics to provide reliable power for houses, pumps and workshops. That's because they must power your home 24/7, including during cloudy days and overnight.
