

How much is a watt for a RV solar panel

Overview

For van life, aim for 200-400 watts of solar power to cover basic needs, including charging devices, running small fans or fridges, and keeping batteries charged. Solar panels are rated for their max efficiency—that is, a 100-watt solar panel will produce 100 watts in perfect conditions. (And unless you're the luckiest camper in the world or have discovered a way to control the weather, we guarantee you won't always have perfect conditions.) The weather. If you only remember one thing: solar “watts” is how fast you can refill your batteries, but your real target is your daily energy use (watt-hours per day). Think about all the electric-powered things you use, and make a list. This RV solar sizing guide walks you through every step — from estimating your daily energy needs to choosing the right panels, batteries, and charge. Now to the big question: How much solar power do I need for my camper?

Add a buffer of 30-50%, and you'll want a 200-250 watt panel setup. Is a 400 watt solar panel enough for RV?

For most minimal to moderate setups—yes.
