

How much is the subsidy for photovoltaic panels now

Overview

The 2022 Inflation Reduction Act (IRA) had promised generous, decade-long tax credits for clean energy (including a 30% credit for home solar installations). However, a mid-2025 budget law – officially the One Big Beautiful Bill Act (OBBBA) – rolled back many of these incentives. Yes, solar panels are still worth it for the vast majority of U.S. The primary financial driver is the cost of grid electricity, which is projected to rise much faster than historical averages. We're here to help you navigate. How much is the subsidy for solar panels?

1. The amount of subsidy for solar panels varies significantly depending on the location, federal and state programs, and specific initiatives aimed at promoting renewable energy. Programs like the federal solar tax credit, state-level solar panel rebates, and utility-based solar subsidies have made it easier for homeowners to go solar and save on energy. **Federal Tax Credit Under Threat:** The 30% federal solar tax credit, worth \$4,000-\$15,000+ for most households, faces potential elimination by December 2025 due to pending Congressional legislation, making 2025 a critical year to act. **Income-Qualified Programs Expanding:** The EPA's \$7 billion Solar.
