## Overview

---

The most common voltage for residential solar setups is 24 volts, though 12 volts and 48 volts are also popular among varying applications. Homeowners often choose 24 volts for efficiency as it minimizes losses over longer distances while being compatible with many inverters. These solar panel voltages include: Nominal Voltage. Think of it like water pressure in a pipe – higher voltage means electricity flows more forcefully through your system. Before we get into the details, let's cover the basic terms you'll see when shopping for solar. To determine the appropriate voltage for solar photovoltaic panels, consider the following: 1. However, the answer is not straightforward.
